•	ret documents continuous text	

Level Indicators:

- A1.1: Read brief texts to locate specific details
- A1.2: Read texts to locate and connect ideas and information
- A2.2: Interpret simple documents to locate and connect information

Task Title:

CalculatingServiceSize A A1.1 A1.2 A2.2 B2.1 B2.2 C3.1 C3.2 D.1

- B2.1: Write brief texts to convey simple ideas and factual information
- B2.2: Write texts to explain and describe information and ideas
- C3.1: Measure and make simple comparisons and calculations
- C3.2: Use measures to make one-step calculations
- D.1: Perform simple digital tasks according to a set procedure

Performance Descriptors: See chart on last page

Materials Required:

- Pencil and/or digital device
- Calculator

Learner Information

Electricians calculate the service size for homes. Service size is the amount of electricity (measured in amperes (amps)) that a house requires. The electricity enters the house through a fuse or breaker panel; the panel is rated for the service size calculated (e.g. 60, 100, 120, 150, 200 amps).

Electricians take into consideration the size of the home, the number of plugs, lights and appliances requiring electricity and the minimum legal service size. They also read the Canadian Electrical Code to determine maximum items/load on a circuit.

Service size is based on 2 factors: calculated load and minimum service size.

The calculated load is the sum of all the loads. A load is anything (a resistor) powered by electricity such as plugs, lights, stoves, dryers and furnaces; light switches are not included in the calculation. Minimum lights, switches and plugs are listed in the Canadian Electrical Code and are based on the room type and size as well as the square meters of the house. The basic load for a house (up to 90 m2) is 5,000 watts; other resistors (such as a stove) are added to this to determine the total wattage.

The minimum service size is based on the square meters of the house. It is legal (and sometimes preferred) to have a larger service size than required (so more items requiring electricity can be added later) but it is illegal to install a smaller service size than required.

Work Sheet

Task	1:
------	----

True	False	
ervice size is meas	sured in amperes.	
True	False	

Task 2: Amperes (amps) = Watts (Total)/Volts

- a) Calculate the total amps required for the following service:
 - Basic load = 5,000 watts
 - Range (stove) = 6,000 watts
 - **Dryer** = **1,000** watts

The service is 240 volts.

Answer:

b) The area of this house is 84 m². Use the Service Size table (partial) below to determine the minimum legal service size for this house. Write your answer in a full sentence below.

Sq. Meters	Minimum	Include
	Service Size	basement
	(amps)	dimensions in
		calculation
Less than 80	60	No
80 - 90	100	No
90 - 180	120	Yes (75%)

Answer:

Information for Task 3:

Rule 12–4,000: A maximum of 12 outlets may be connected to a circuit. These may be plugs (excluding special ones in the kitchen or for appliances such as a refrigerator) or lights or any combination. It is better to have a circuit contain both lights and plugs. Light switches do not count as part of the 12. It is encouraged that 10 (or even 8) plugs or lights be on any circuit but 12 is the legal maximum.

Count a single or duplex receptacle (plug) as one outlet.

Rule 2-316 and 30-502: The Electrical Code requires at least one light, controlled by a switch for the dining room, den and living room.

Rule 26-712(a)(c) requires that a receptacle (plug) be no further than 1.8 m from an appliance (e.g. lamp, television).

Task Title: CalculatingServiceSize_A_A1.1_A1.2_A2.2_B2.1_B2.2_C3.1_C3.2_D.1

Task 3: a) A house has a living room, a dining room and a den. The den has 4 receptacles, the living room has 4 and the dining room has 3. Calculate the number of lights, plugs and switches required for the three rooms.

Λ	ns		\sim	r
$\overline{}$	112	5 V V	-	ι.

Task 3b): Can the 3 rooms be put on one circuit? Explain your answer.

Answer:

Task Title:

CalculatingServiceSize A A1.1 A1.2 A2.2 B2.1 B2.2 C3.1 C3.2 D.1

Answers

Task 1: a) False

- b) **True**
- c) **5,000**

Task 2: a) Amperes (amps) = Watts (Total)/Volts

Calculate the total watts.

Total watts = 5,000 + 6,000 + 1,000

Total watts = 12,000

Amperes (amps) = Watts (Total)/Volts

Amperes (amps) = 12,000/240

Amperes (amps) = 50

b)84 m² is more than 80 m² but less than 90m².

The minimum legal service size is 100 amps.

Task 3: a) Add the receptacles of the 3 rooms

$$4 + 4 + 3 = 11$$

Each room must have a light and a switch.

The three rooms will have 3 lights and 3 switches.

Add the lights, switches and receptacles.

$$3 + 3 + 11 = 17$$

b)The maximum number of outlets on a circuit is 12. Light switches do not count.

$$17 - 3$$
 (light switches) = 14

The 3 rooms cannot be on the same circuit because there are more than 12 outlets.

Teacher Note: this answer must be based on the answer the learner gave in 3, a) ...if that number was different than 17 then base the result on the number they use.

Task Title:

CalculatingServiceSize_A_A1.1_A1.2_A2.2_B2.1_B2.2_C3.1_C3.2_D.1

Performance Descriptors 1

Levels	Performance Descriptors	Needs Work	Completes task with support from practitioner	Completes task independently
A1.1	Reads short texts to locate a single piece of information			
A1.2	Scans text to locate information			
	Locates multiple pieces of information in simple texts, makes low-level inferences			
	Makes connections between sentences and between paragraphs in a single text			
	Reads more complex texts to locate a single piece of information			
	Follows the main events of descriptive, narrative and informational texts			
	Obtains information from detailed reading			
A2.2	Performs limited searches using one or two search criteria			
	Extracts information from tables and forms			
	Uses layout to locate information			
	Makes connections between parts of documents			
	Makes low-level inferences			

Task Title: CalculatingServiceSize_A_A1.1_A1.2_A2.2_B2.1_B2.2_C3.1_C3.2_D.1

Levels	Performance Descriptors	Needs Work	Completes task with support from practitioner	Completes task independently
B2.1	Writes simple texts to request, remind or inform			
	Conveys simple ideas and factual information			
	Uses sentence structure, upper and lower case and basic punctuation			
B2.2	Performs limited searches using one or two search criteria			
	Extracts information from tables and forms			
	Uses layout to locate information			
	Makes connections between parts of documents			
	Makes low-level inferences			
C3.1	Adds and subtracts whole number measurements			
	Recognizes values in number and word format			
C3.2	Calculates using numbers expressed as whole numbers, fractions, decimals, percentages and integers			
	Understands and uses formulas for finding the perimeter, area and volume of simple, common shapes			

Task Title: CalculatingServiceSize_A_A1.1_A1.2_A2.2_B2.1_B2.2_C3.1_C3.2_D.1

Levels	Performance Descriptors	Needs Work	Completes task with support from practitioner	Completes task independently
	Chooses and performs required operation(s); may make inferences to identify required operation(s)			
	Selects appropriate steps to solutions			
	Interprets, represents and converts measures using whole numbers, decimals, percentages, ratios and simple, common fractions (e.g. ½, ¼) Uses strategies to			
	check accuracy (e.g. estimating, using a calculator, repeating a calculation, using the reverse operation)			
D.1	Follows simple prompts			
	Follows apparent steps to complete tasks			
	Interprets brief text and icons			
	Locates specific functions and information
